SAFETY Enlightenment

**Lightning Myths & Shocking Facts:**

**Myth** If it's not raining or cloudy, you're safe from lightning.

**Fact** If you can hear thunder, lightning is nearby. Lightning often strikes over 10 miles from the center of a thunderstorm.

**Myth** Lightning travels at about 220,000,000 mph and will have exited the body by the time you approach. Check for a pulse and render first aid if possible. Call 911 immediately.

**Myth** A lightning strike victim carries a charge and should not be touched.

**Fact** If struck, it is the metal frame of the car that provides protection. The charge travels through the frame and into the ground without harming occupants if they avoid touching anything that conducts a charge.

**Protect Yourself**

Use the 30/30 rule: When you see lightning, count until you hear thunder. If that time is 30 seconds or less, the thunderstorm is within six miles of you and is dangerous. Immediately seek shelter indoors or in a hardtop vehicle and remain until you have not heard thunder for 30 minutes.

Don’t touch concrete surfaces, including those in a basement or garage. Lightning can travel through the metal wires in concrete walls and flooring.

Stay off corded phones and plugged in electronics.

Avoid plumbing and water, including bathing or doing laundry.

Never seek shelter under trees, poles or other tall structures as they are more likely to be struck by lightning.

**Protect Your Property**

Unplug appliances and other electrical items, such as computers and televisions, to prevent damage from surges caused by lightning strikes.

Surge protection can help prevent damage to your electronics. There are two types of surge protection:

**Point-Of-Use Surge Protection:** Protects only the items that are directly plugged into the device from most electrical surges.

**“Whole Home” Surge Protection:** Located at your main electrical panel or the base of the electric meter, this device provides protection for your entire electrical system.

However, neither type can safeguard against a direct lightning strike. If you live in an area prone to lightning, consider a lightning protection system.
